

PowerPoint Skills

Basic Consulting Skills 2011

Øystein Torbal

Carl Henrik Bertelsen

Deloitte AS.

Norefjell, 6th of September 2011

At the end of this course, you should be able to...

Objectives

- Describe why PowerPoint skills are important at Deloitte Consulting
- Understand how to design effective slides
- Produce slides according to the Deloitte Consulting PowerPoint Template
- Work effectively in PowerPoint

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

Deloitte employs specific templates, styles and formats when communicating information, PowerPoint is the primary means of communication

Standardized formats are used

■ Externally

- Clients are exposed to consistent documentation even if the consultants themselves might change
- Executives can read the slide and grasp the message quickly

■ Internally

- Work can be easily consolidated among a team
- Time is saved that would otherwise have been spent on slide formatting

PowerPoint is the primary tool

■ PowerPoint is the primary means of communication

- Both internally and externally
- Both formally and informally
- For printed reports and visual presentations

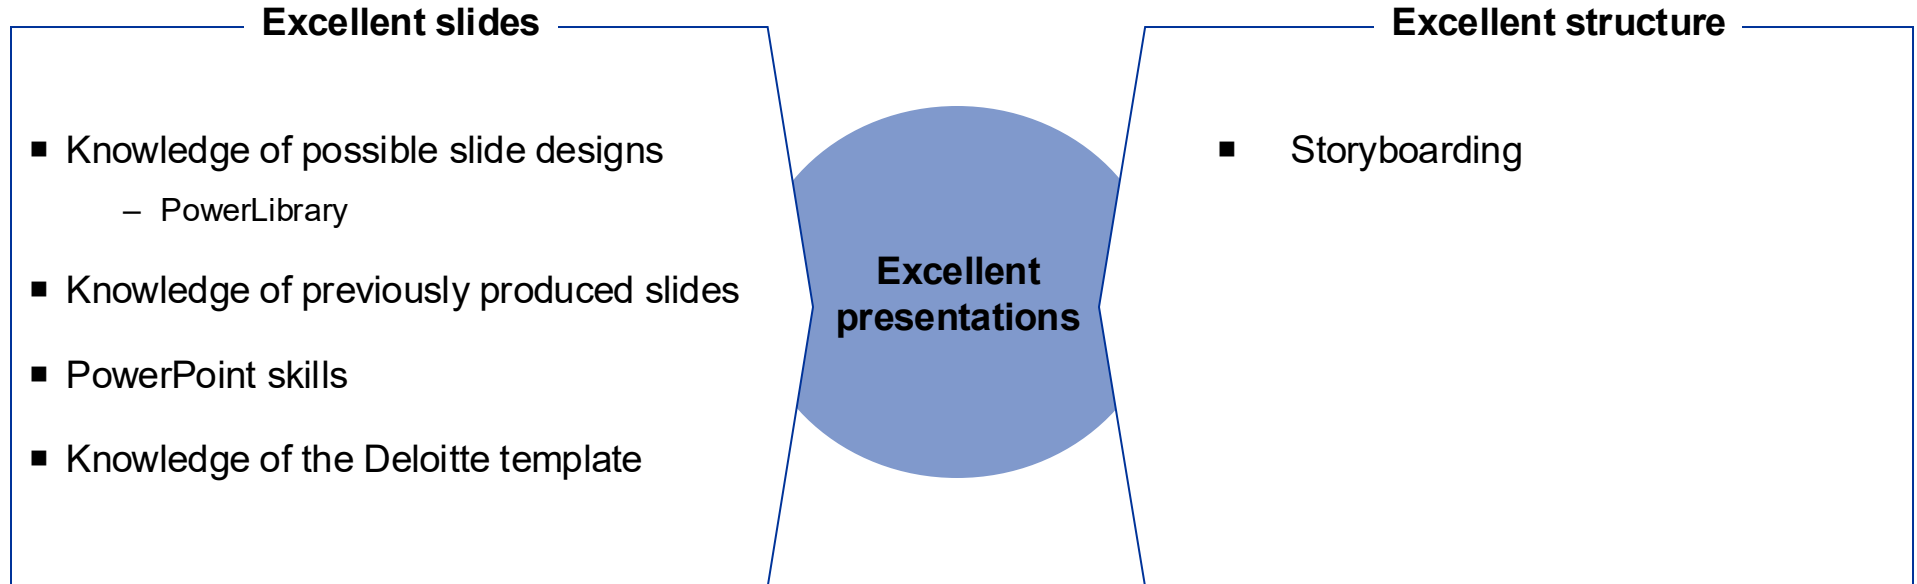

■ PowerPoint is easy to read

- The font is large
- Conducive to summary style presentations
- Helpful graphics and “bells & whistles” can be added

■ Exceptions: letters

- Proposals or progress updates may take the form of a letter (Word)

To achieve the standard of excellence in our presentation deliverables, we have to design excellent slides using excellent structure

In addition, we must be able to produce excellent presentations within a limited, and often short, time-frame. It is therefore very important that we have sound knowledge of our templates, slide examples, how to re-use material and how to produce new slides effectively.

Agenda

Introduction

Designing good slides

- Characteristics of a good slide
- Types of slides
- Graphical excellence
- Deloitte Power library

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

We differentiate between quantitative and qualitative slides

Quantitative presentations

- Findings based on quantitative data must be presented and commented
- Contains tables, figures, or graphs
- Even though the data material may be neatly presented, it is seldom self-explanatory and often easy to misinterpret
- Graphs must be explained and interpreted
- All data sources must be documented and clearly stated
- The main findings must be emphasized
- Consequences and/or recommendations based on observations must be clearly communicated

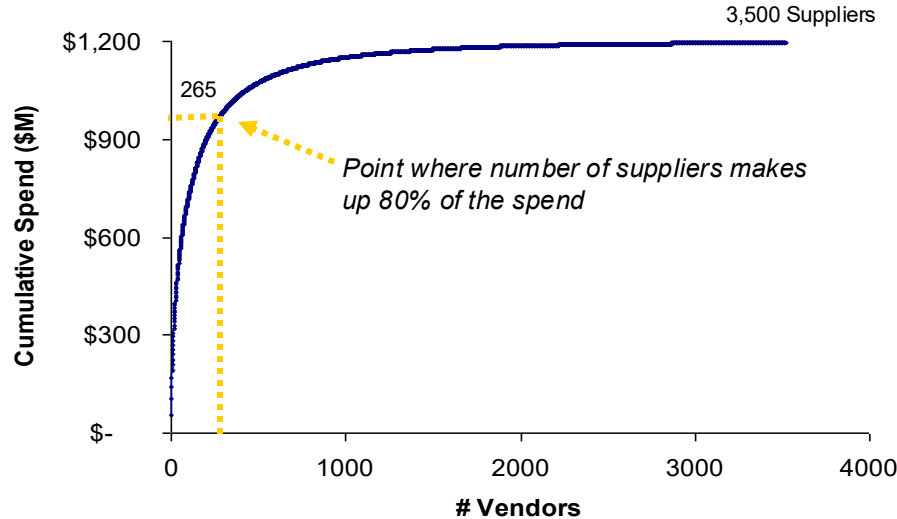

Qualitative presentations

- Qualitative observations, findings, and conclusions must be presented and communicated
- The main points, connections, and findings are often complex and not easy to understand
- Graphic figures should be used to illustrate connections and make the main messages more coherent
- Statements should be complete (full sentences)
- The verbal precision must be of the same standard as when writing full reports and documents

The current supply base is highly fragmented as vendor relationships, and spend categories are not standardized or always coordinated across the business

Quantitative slide example

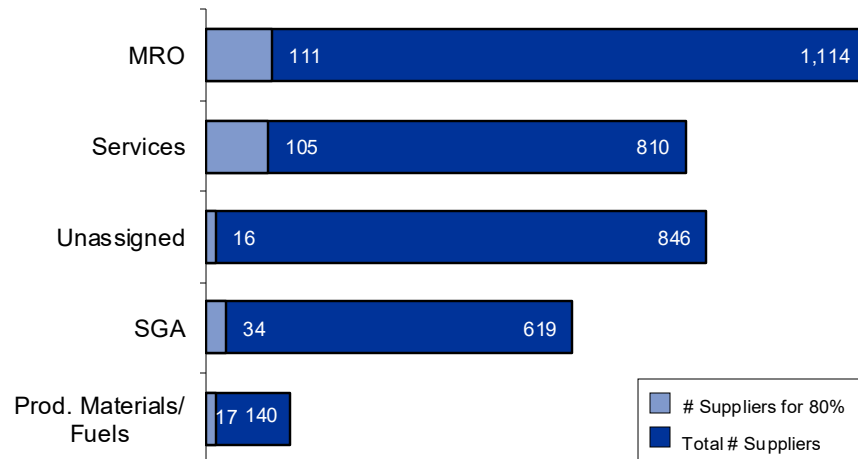

Overall Supplier Fragmentation

Observations

- There are ~3,500 total suppliers
- 265 suppliers, or 8%, make up the top 80% of spend
- The top 10 suppliers account for more than a third of the spend
- Despite similar spend categories, only a limited number of suppliers are leveraged across Division A and Division B

Category Supplier Fragmentation

The procurement organization is faced with inefficient and ineffectual processes which results in people “chasing approvals” and “fire fighting”

Qualitative slide example

	I. Create Requisition	II. Obtain Approval	III. Process Order	IV. Receive Goods	V. Invoice and Invoicing Payment
Current State Observations	- Requisitions are underestimated to fit approval limits - Suppliers complete job with knowledge that work will exceed PO	- Approval process is sometimes repeated due to price changes; “stop-gap” process change in works - Approvals occur after the majority of work is completed	- Low spend POs consume a significant amount of time - Alternative payment methods, including blanket POs or pcards, are rarely used regardless of PO size	- CAT materials are received into two different systems - CAT orders cannot be received at plants - Canadian sites do not use central warehouses	- There are two points for supplier remittance (Mosaic and FSC) - Payments are delayed due to lost invoices at FSC or in Stellant
Supporting Information	20% of POs exceed the original PR by 35%, on average	On average, it requires 3 - 4 days to receive approval	50% of POs are for less than \$1,000 - accounting for 3% of spend - Nearly 80% of purchase orders are for less than \$5,000	Since CAT orders cannot be received at plants, payment can be delayed by 3 or more days	Over \$1 MM in claims were pursued in 2007 due to duplicate payments
Groups Involved	- Operations - Planner - Catalog Team - Purchasing	- Operations - Various approvers based on approval level	- Purchasing - Operations	- Plant Warehouses - CAT	- A/P - FSC - Planner - Operations - Purchasing (PAs and Buyers)

Though good content is our main deliverable to clients, textual and visual aspects are important to consider when making a good slide

Text

- Make sure the text is large enough to read; presentations often require larger font sizes than reports
- Make sure to review language, sentence structure, and grammar thoroughly before holding the presentation or handing over deliverable

Punctuation

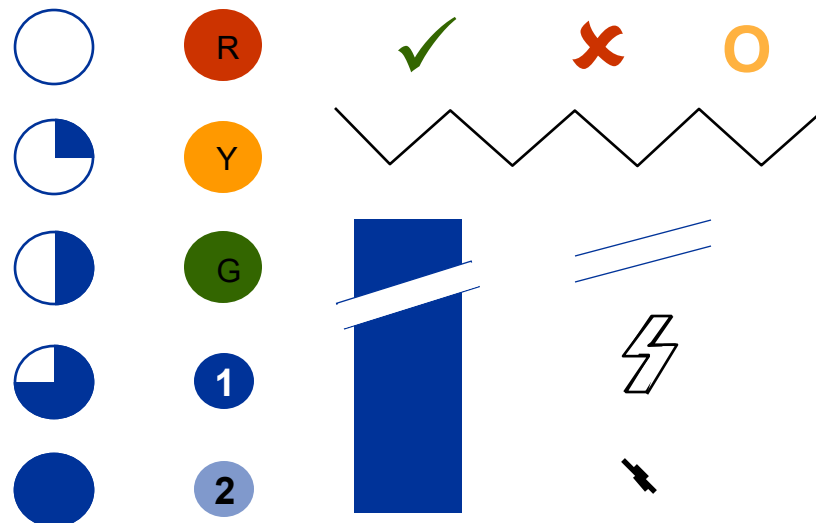

- We deliver answers to our clients problems, not questions
 - If you lack data, do not use “?” as a symbol. Such uncertainties should be noted by e.g. “NA”
- Do not use “!” in presentations
- Bullet-points should not be ended with “.”

Pictures / Graphs / Illustrations

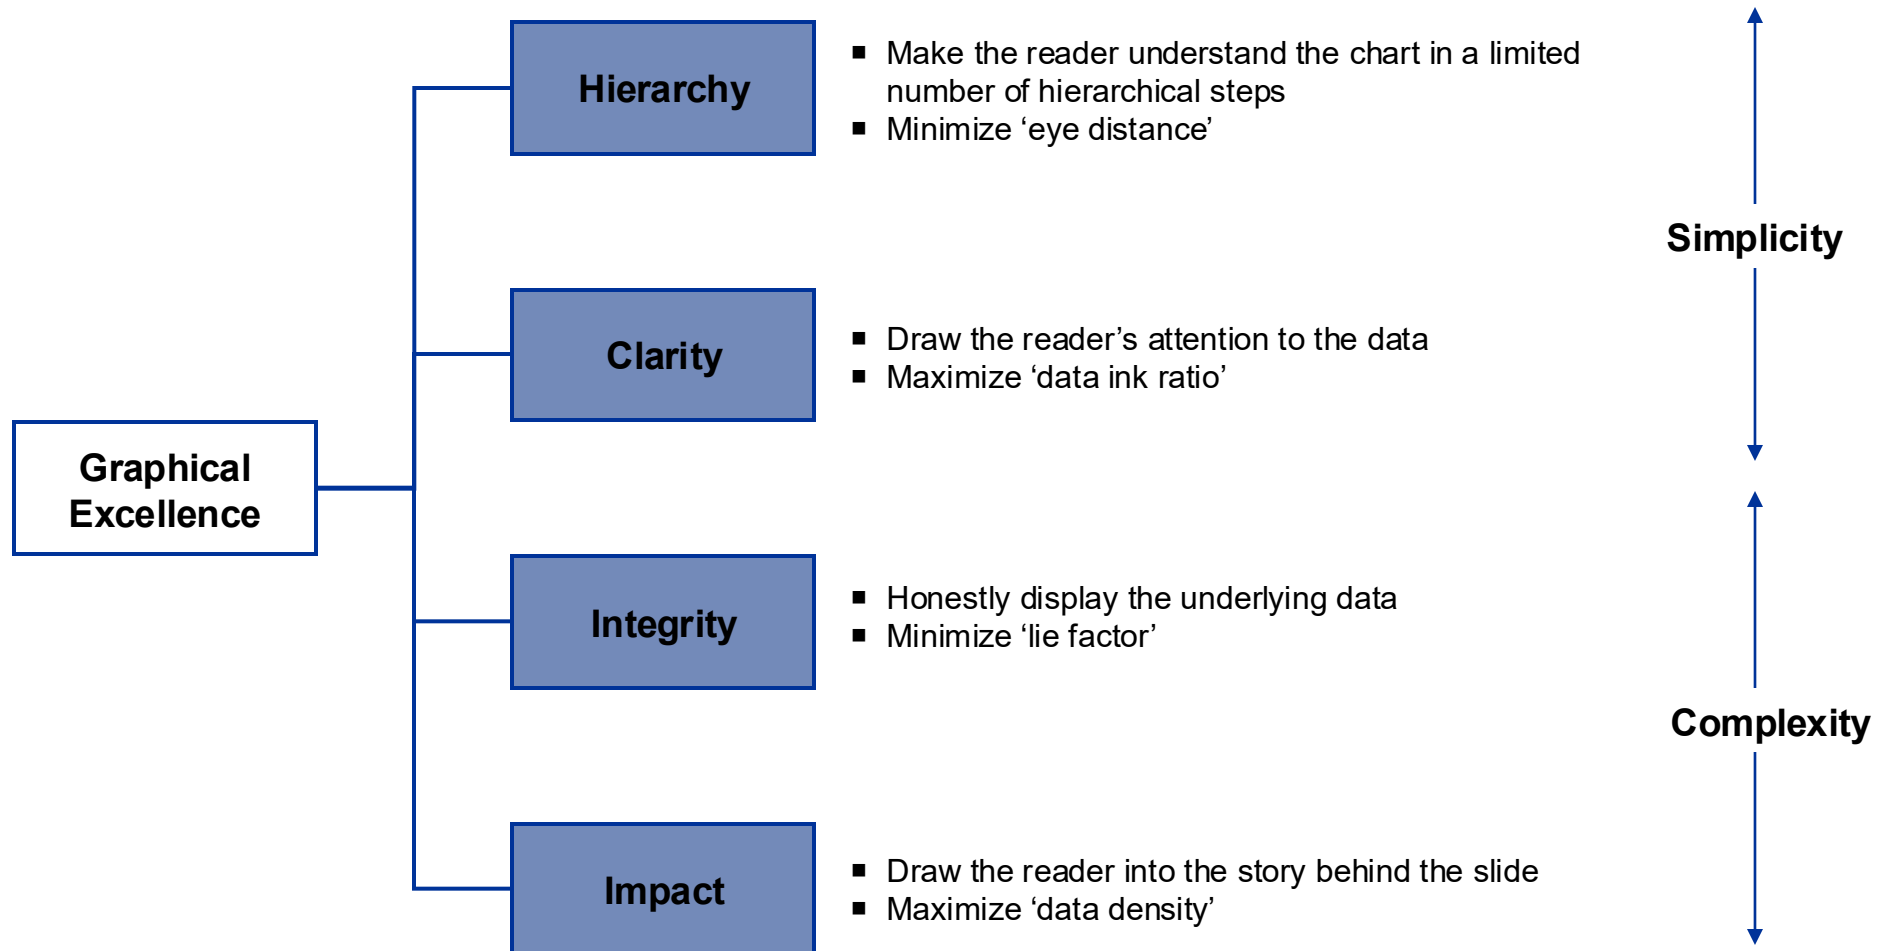

- Graphs should be large enough to read
- Text in illustrations must fit the illustration-borders
- Do not use clip-arts in presentations

Symbols

- Consider the message and purpose the symbols send
- Be aware of color-blindness (8% of men and 0.3% of women are color-blind) when using traffic lights as symbols
- Scale-breaks in graphs should be appropriately visualized

Good slides convey complex information in a simple way

■ Principle

- Make the reader understand the chart in a limited number of hierarchical steps, similar to a pyramid of information
- A hierarchy of fonts, blocks and colors should automatically guide the reader from the most important to the least important part of the slide

■ Common mistakes

- The order of the data is unfamiliar to reader, therefore be sure that
 - Circles are to be read clockwise
 - Time series go horizontal from left to right
 - Data order should be time, ranking, structural, alphabetical or numerical
 - Data order should be consistent throughout the presentation
- Unnecessary legends
- Color coding inconsistent with data ranking
- Reader is forced to ‘search’ across the slide to understand it

Hierarchy example: A hierarchically structured slide lets the reader walk through your slide in a limited number of obvious steps

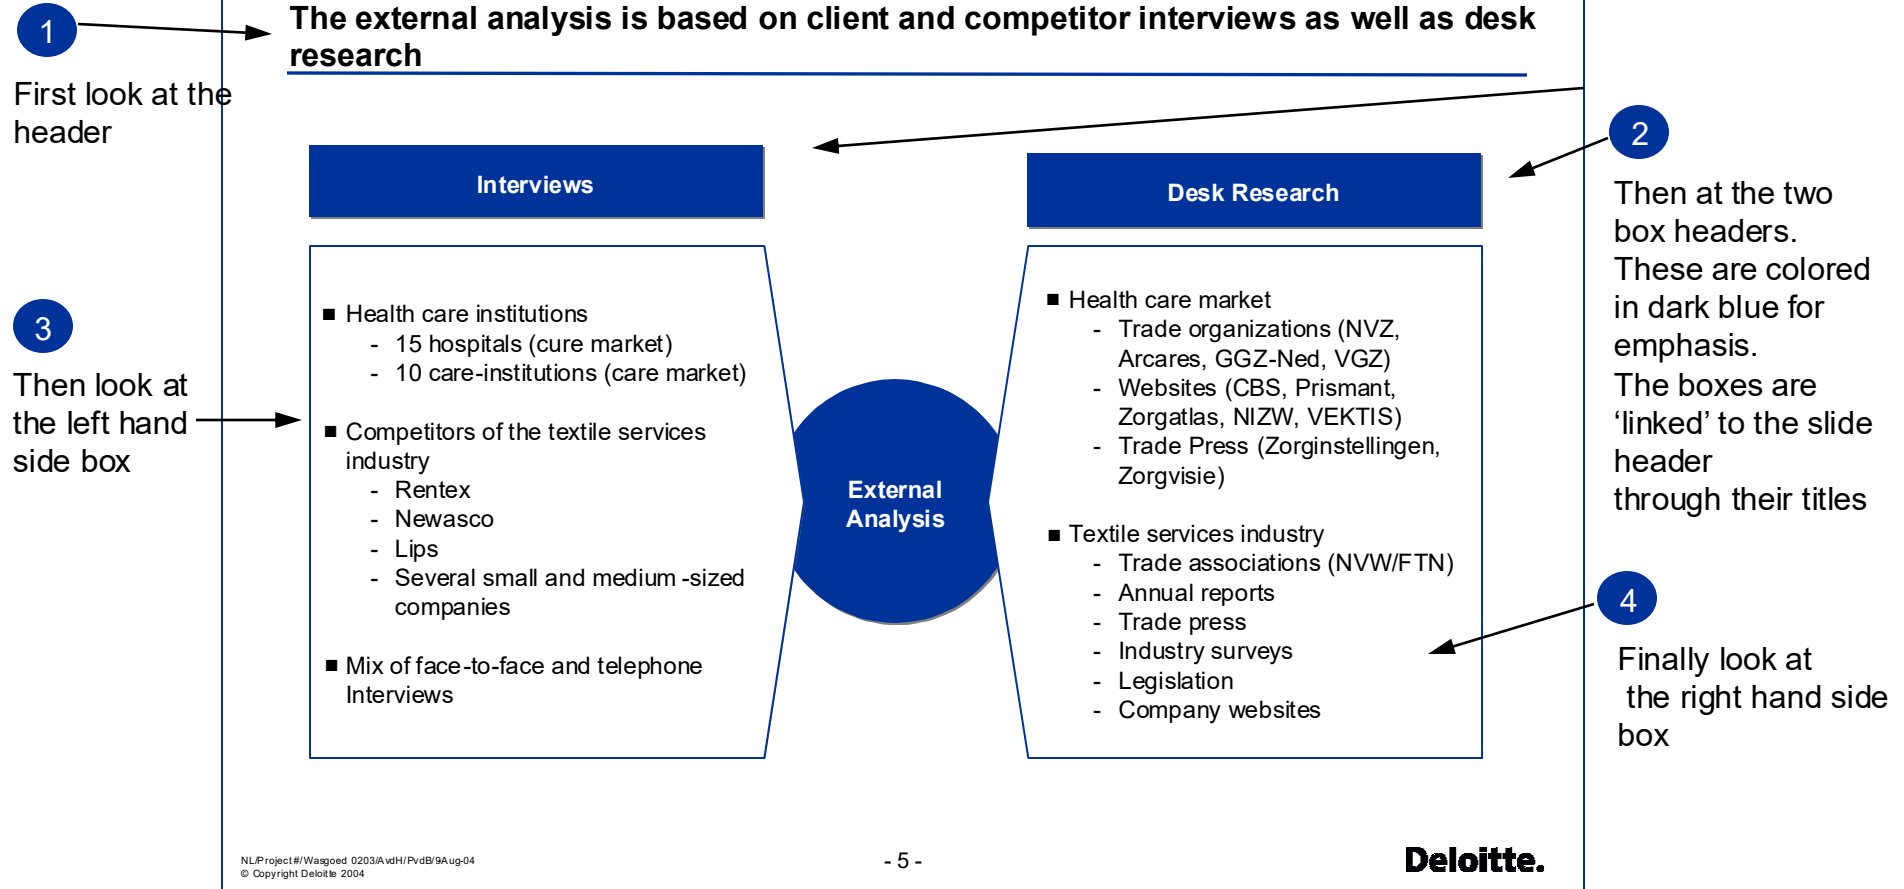

Graphical
Excellence

Hierarchy

Clarity

Integrity

Impact

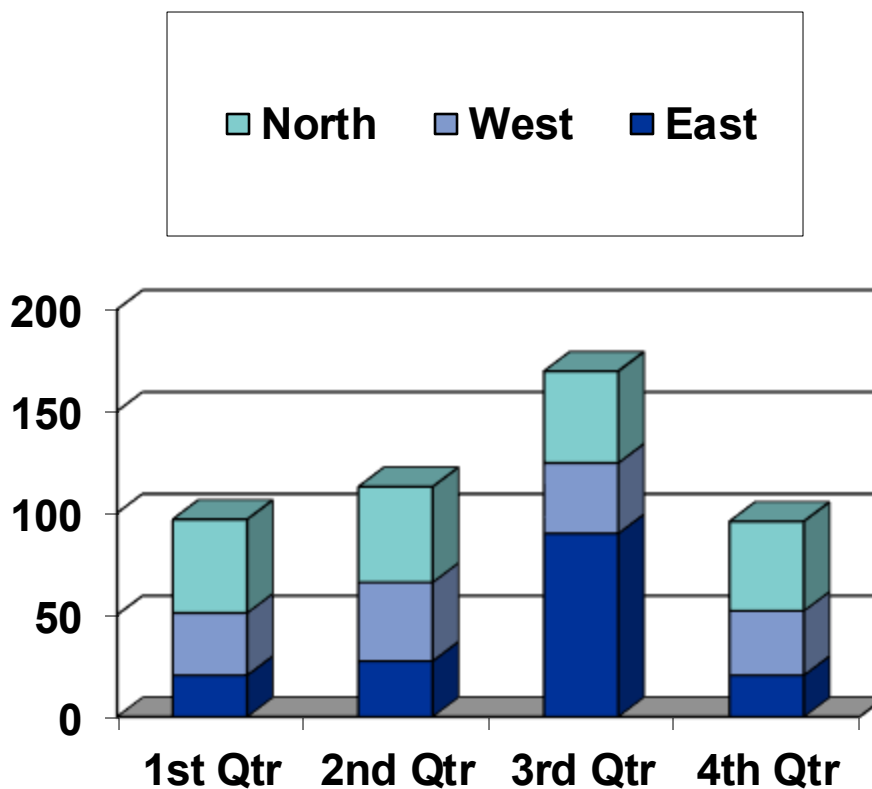

Use variations in colors and fonts **only** to emphasize the information hierarchy, **not** to embellish

■ Principle

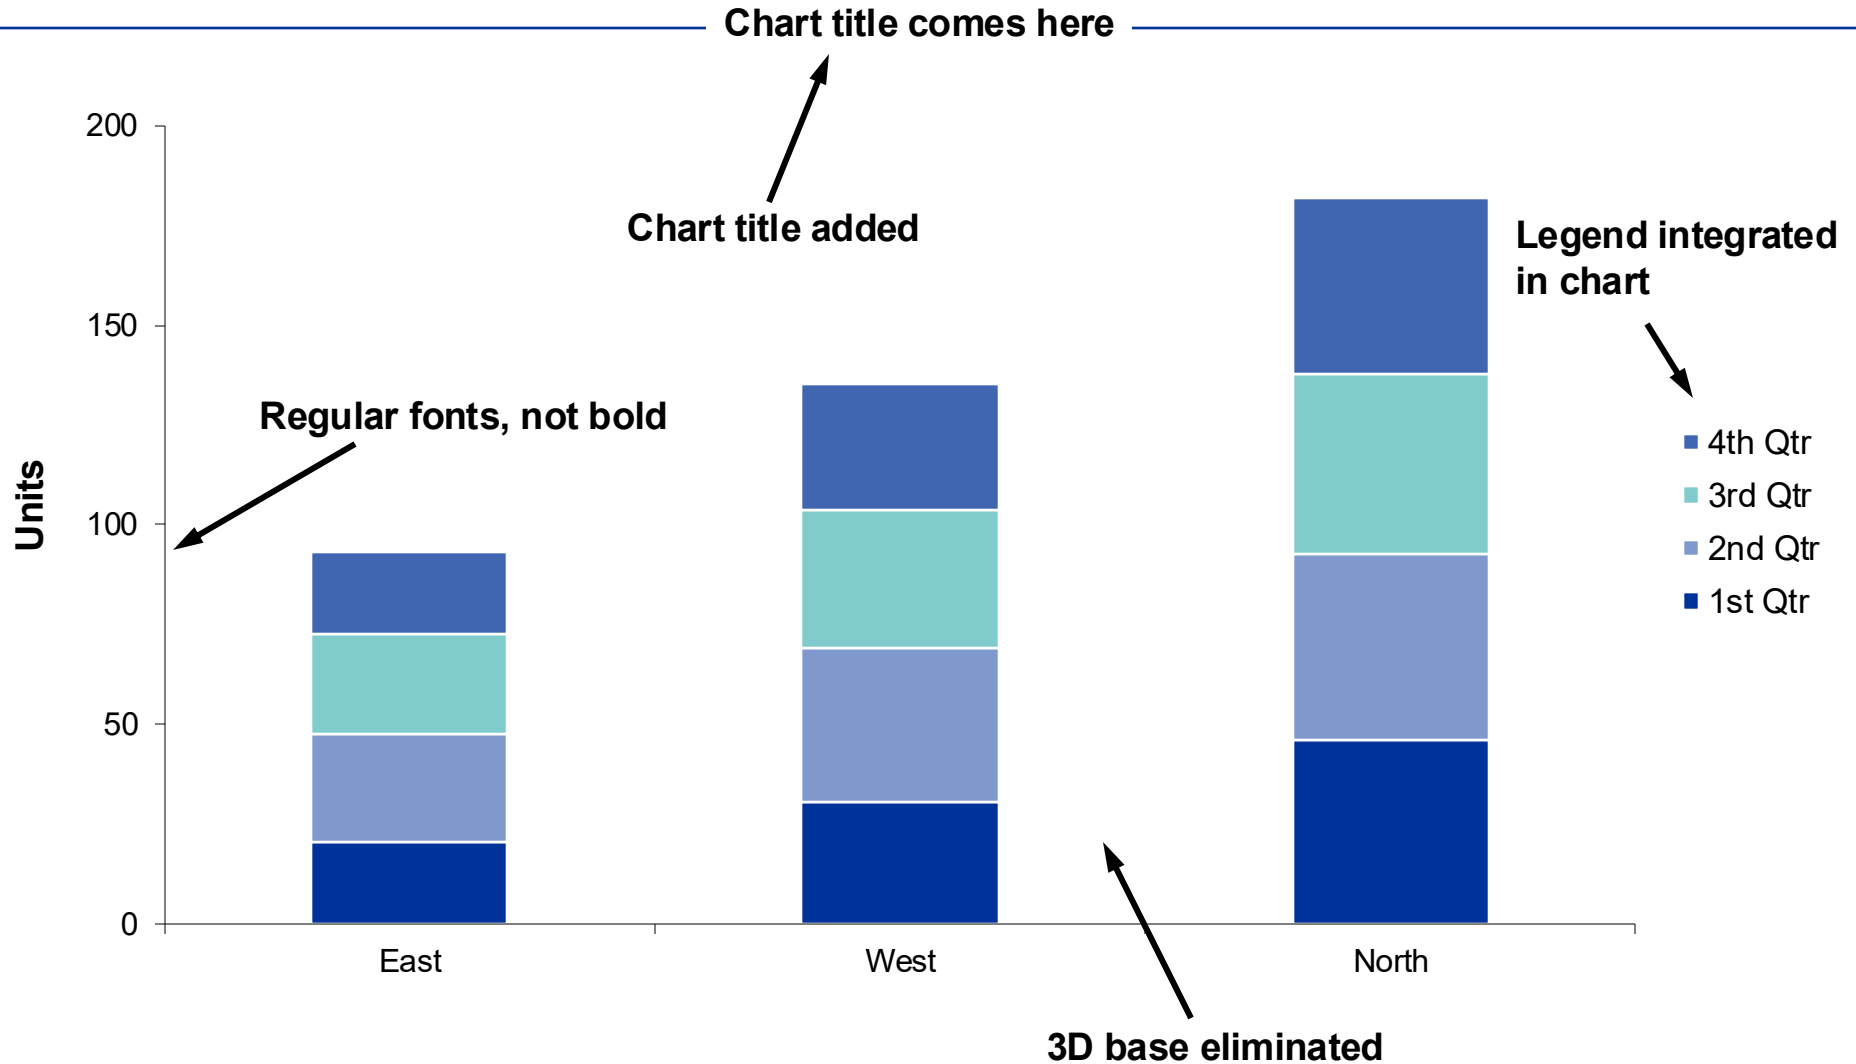

- Draw the reader's attention to the data first and foremost
- Erase everything that can be left out

■ Common mistakes

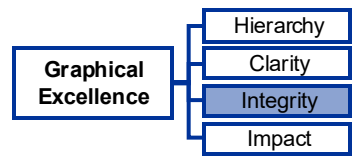

- Embellishments ('Chart Junk')
- Cross-hatching (krysskravering)
- Grid Lines
- 3D effects
- Missing chart title

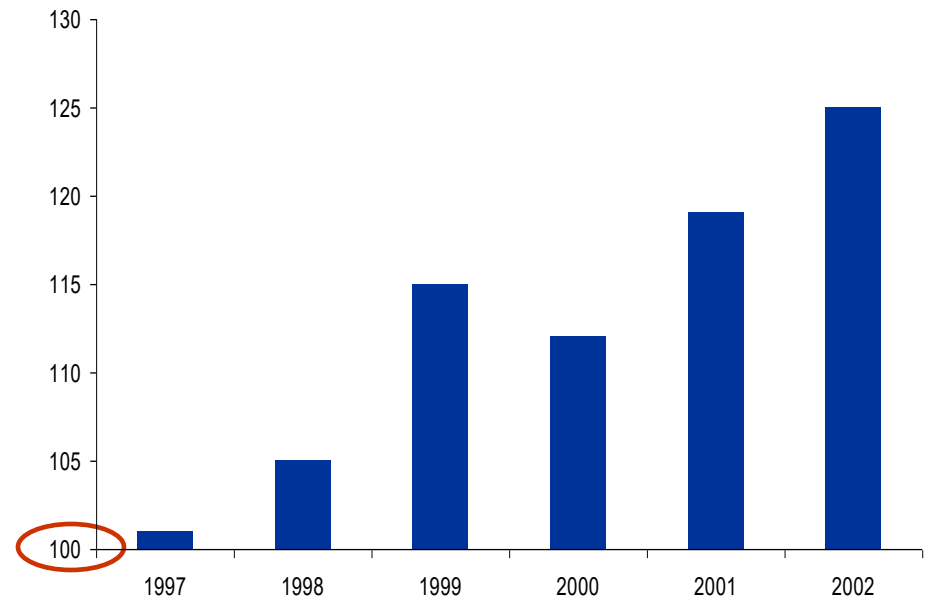

Deloitte chart example (Deloitte template)

Data Integrity

- Principle
 - Honestly display the underlying data
- Common mistakes
 - Manipulation of axes to make changes smaller

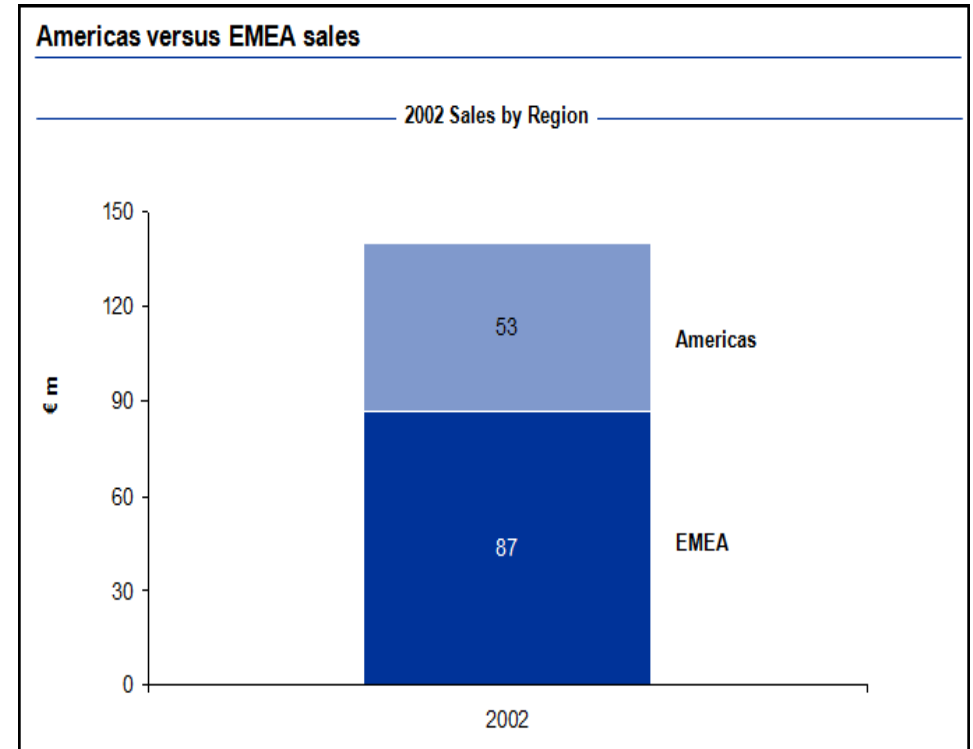

■ Principle

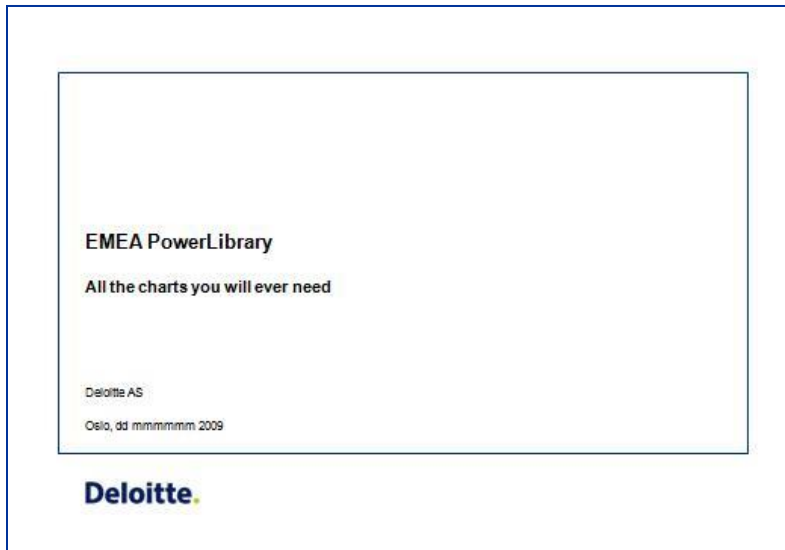

- Draw the reader into the story behind the chart
 - What is the take away?

■ Common mistakes

- Few data displayed
- Trivial observations
- Lack of observations
- Lack of link between header and data

The PowerLibrary is our main source for basic slide ideas and generic Deloitte slide structures and will help you save time

Content of the PowerLibrary

- Structured text
- Trees
- Graphs
- Shapes
- Maps
- Special Graphics
- Conceptual Charts

Where to find the PowerLibrary

- The PowerLibrary is available on the R-drive (R-området)
- <\\NoosI62\data\DC\Maler>

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

To create a uniform look, these generic guidelines apply to all slides

- Arial is the only font that can be used
- Main slide text is 14-pt Arial
 - Indented and other text is 12-pt Arial
- You can emphasise words by making them **bold**
 - However limit the use of bold
 - Never underline words, do not use *italics* or shadows
- All text is coloured black, RGB code 0 - 0 – 0
- The slide background is white, RGB code 255 - 255 - 255

- The slide headline is 18pt Arial bold
- Is always a complete sentence
- No more than 2 lines

All information should be entered within the working area marked in blue so that each slide is structured within the same boundaries

- This is the working area of slide
- The page size is A4 Paper (210x297mm)
- Horizontal guidelines are at 6.40 cm and 8.00 cm from the centre of the slide to the top respectively the bottom of the working area
- Vertical guidelines at 12.60 cm from the centre of the slide to both the left and the right edges of the working area
- To toggle the guidelines on and off, press Alt F9
- Do not exceed the working area of the slide

Each slide contains three fixed elements, do not worry about these as long as you use the standard template as these are pre-set in the template

1

- A rule of 1.5-pt
- Colour is blue (RGB code 0 - 51 - 153), the 'Automatic' colour in the Line colour menu

2

- Slide numbers use Arial 10-pt font and centered on the slide

3

- The Deloitte logo appears here
- Size of logo is 1.9cm wide

However, you do need to think about the three slide elements as these are not set standards in the template and may vary from slide-to-slide

Optional descriptive header in 14-pt Arial bold

1

- A descriptive header can be placed on top of the working area
- It uses a 1pt blue (RGB code 0 - 51 - 153) rule, this is the 'Automatic' colour in the Line colour menu
- Text is horizontally centered and vertically aligned with the rule
- The rule should have the same width as the content below it, i.e. can be shorter than displayed here
- You may use multiple of these headers in charts

2

- Footnotes and sources are located here, within the working area in 10-pt Arial
- The text box can extend to at most 75% width of slide
- Text is anchored to the bottom, enabling deletions or additions without having to move the box

Note:
Source:

3

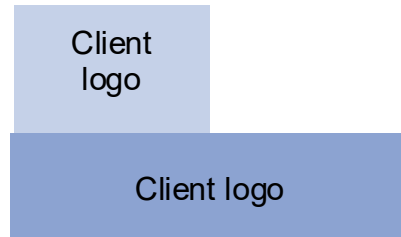

- If you want to use a client logo on each slide place it here
- Paste it in the slide master (View - Slide Master)
- Size the logo so that it is marginally larger than the Deloitte logo

■ Place logo here
if tall

■ Place logo here
if long

Client
logo

- These five guidelines apply to the title page

1

- Size of the client logo should be approximately 20% visually larger so that the client logo is more prominent than the Deloitte logo

2

- If you need to add “draft” to cover page, please add to upper right corner and use the stamp that is shown here.

**Title sentence case 20-pt Arial bold, line spacing 1.06 lines
(two lines max.)**

**Subtitle sentence case 16-pt Arial bold, line spacing 1.06 lines
(two lines max.)**

3

- Use the appropriate legal name of your country's practice
- The name can be changed in the slide master (View - Slide Master), use 12-pt Arial font

Deloitte AS.

4

- Enter location and date where the document is being delivered or presented in 12-pt Arial

Location, dd Month yyyy

5

- When using a client logo, the Deloitte logo sits here
- When not using a client logo, e.g. for internal presentations, move the Deloitte logo to the client logo location

Deloitte.

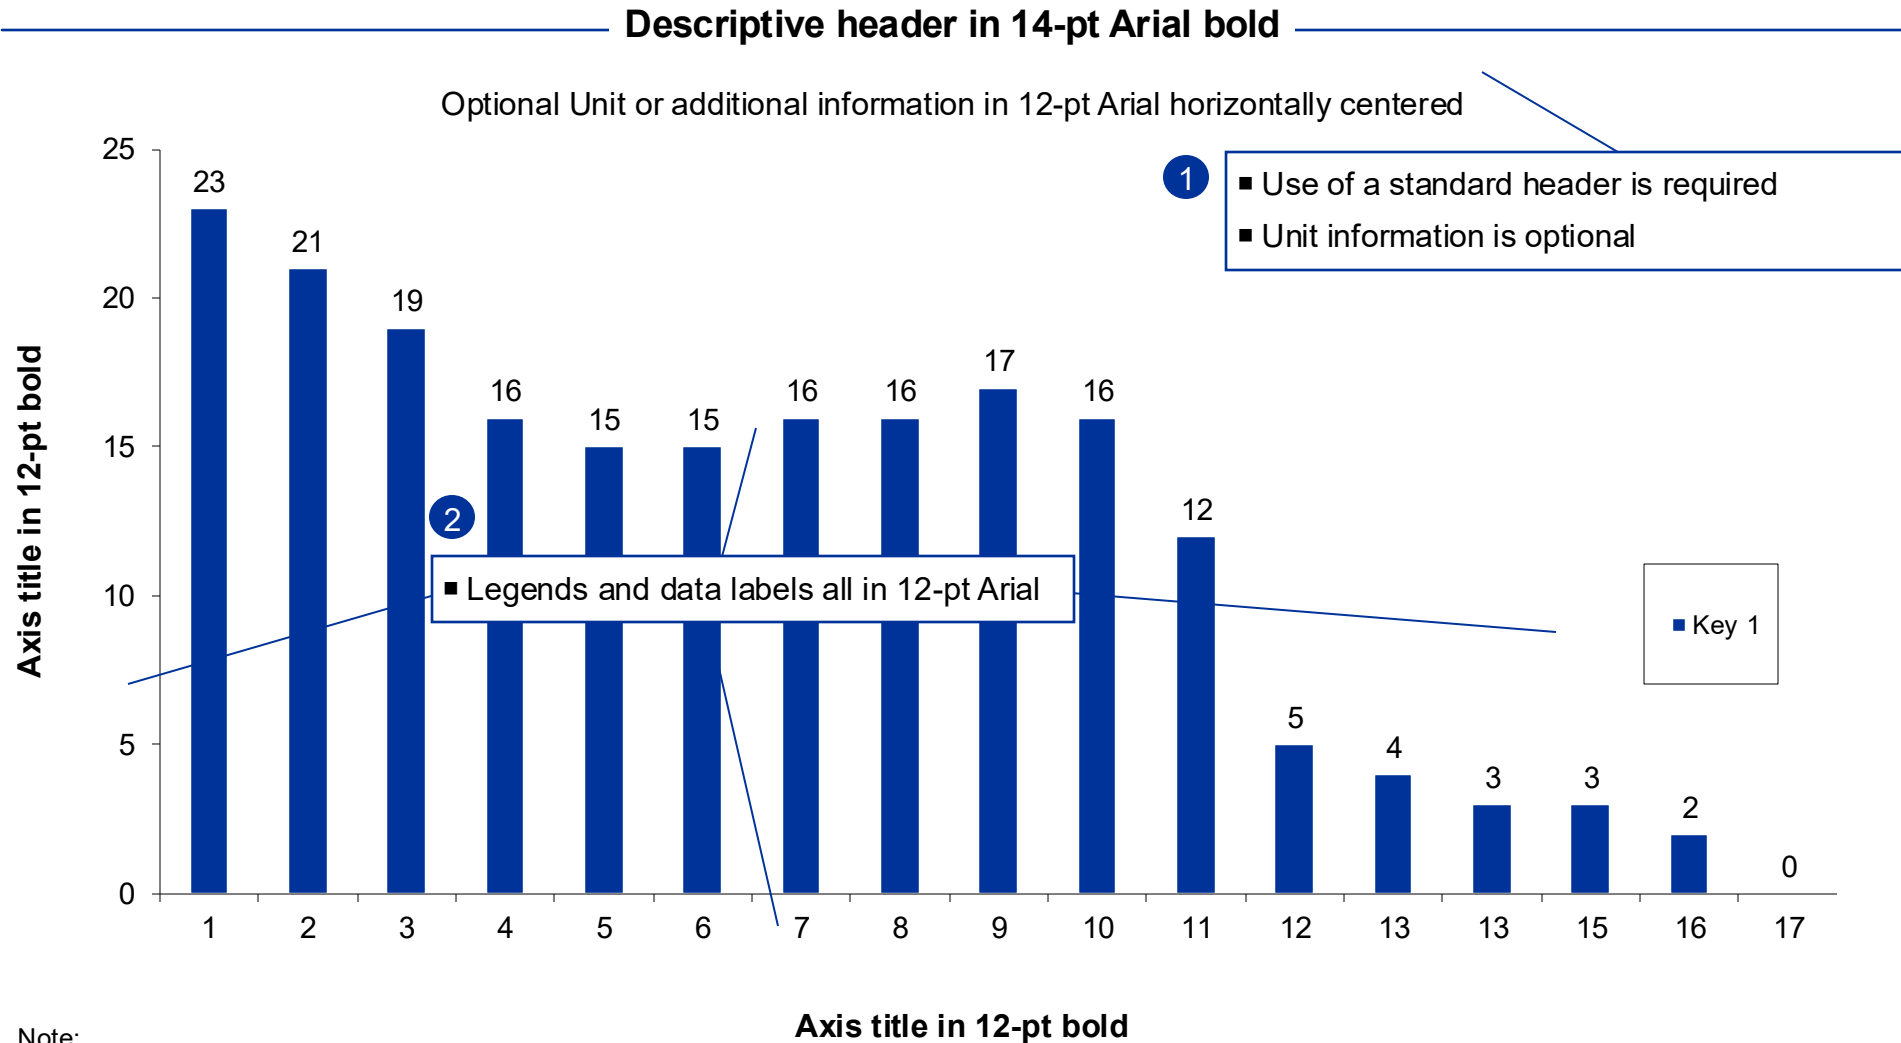

Agenda slides are based on a simple PowerPoint table, three simple rules apply

Chapter name, 14-pt	1 ■ Highlight the next chapter with a blue background ■ Click on the row and select this colour from the Fill Colour button  on the Drawing toolbar ■ You can find this colour on the top row, second from the right (RGB code 128 - 153 - 204)
Chapter name, 14-pt	
Chapter name, 14-pt ■ Section name, 12pt ■ Section name, 12pt	
Chapter name, 14-pt	2 ■ To add bullets for sections within a chapter, place your cursor after the last word and press Enter ■ Click Bullets button in the Paragraph section of the Home ribbon ■ Press Ctrl-Tab to indent or click the Increase Indent button  on the Formatting Toolbar ■ Indicate next section by making its name bold
Chapter name, 14-pt	
Chapter name, 14-pt	
Chapter name, 14-pt	3 ■ Add or remove Chapters by inserting or deleting table rows ■ Click on the row, then right click and select the command from the contextual menu
Chapter name, 14-pt	

These guidelines apply to bulleted text slides

- The Bullet symbol is either a square (■) or dash point (–). Do not use circles(●), arrows(➤), etc.
- Bullet text is 14-pt
 - Dash point is 12-pt
 - Sub bullet is also 12-pt
- To add dashes and sub bullets
 - First click Enter
 - Then click on the Increase Indent button on the Formatting toolbar  or enter Tab
- To decrease the indent
 - First hit Enter
 - Then click on the Decrease Indent button on the Formatting toolbar  or enter Shift-Tab
- Start every sentence with a capital letter
 - Do not end with a period (".")
 - Use commas (,) colons (:) and semicolons (;) where appropriate

For chart and other slides, two additional guidelines apply to make the charts and graphs easier to understand

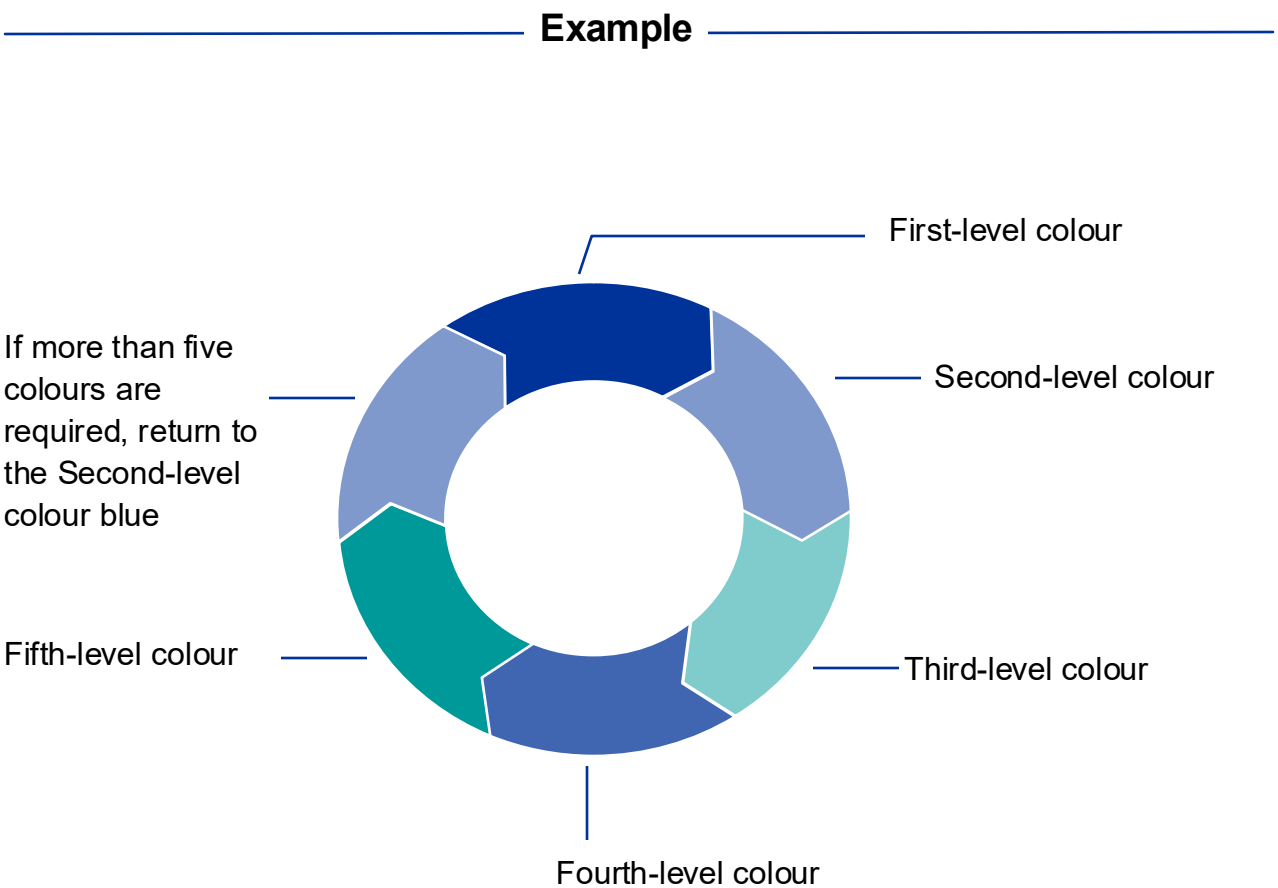

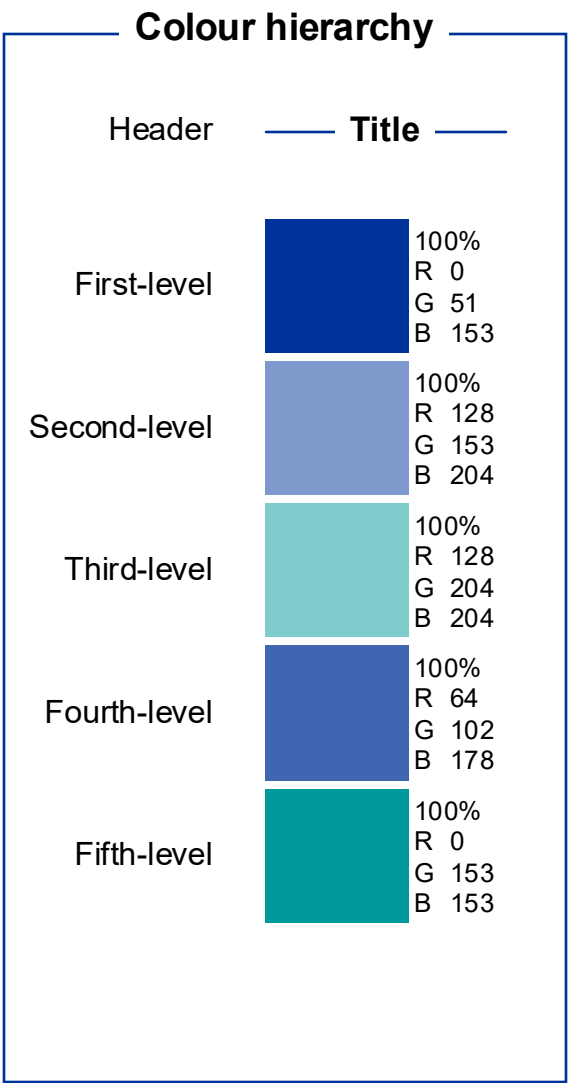

- This special slide is designed for a preface or other brief, introductory remark, e.g. preceding a new chapter instead of an agenda slide

Brief text, 16-pt bold

Text for preface or other brief, introductory remark

- This slide has the background items omitted (no footer logos, page numbers, title or blue line under the title).
- To omit background items, right click, choose Format Background, check “Hide Background Graphics”

Use these colours as primary colours for chart sections and for boxes

In addition, you can use these secondary colours for occasional highlighting and in heat maps and traffic light charts

Secondary colours

R 153
G 204
B 51

Used to emphasize
a slide area

R 0
G 0
B 102

Used to
emphasize a line

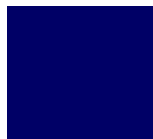

100%
R 255
G 153
B 0

Used as a warm contrast
colour for charts

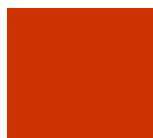

■ If you copy and paste heap maps and traffic light charts from the 'Power Library' with preformatted charts you automatically get the right colour and do not have to worry about these secondary and other colour

Other branded colours

R 0
G 0
B 102

Used to
emphasize
a piece of text

100%
R 204
G 51
B 0

Used to
emphasize
a point

100%
R 51
G 102
B 0

Used to show
traffic light example

75%
R 255
G 178
B 64

50%
R 255
G 204
B 128

} These tints of orange to be used for heat chart only. Use the appropriate RGB colour values instead of transparency tints.

1

- End each presentation with this 'boilerplate' and disclaimer. This slide has the background items omitted (no footer logos, page numbers , title or blue line under the title)

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee, and its network of member firms, each of which is a legally separate and independent entity. Please see www.deloitte.com/about for a detailed description of the legal structure of Deloitte Touche Tohmatsu Limited and its member firms.

Deloitte provides audit, tax, consulting, and financial advisory services to public and private clients spanning multiple industries. With a globally connected network of member firms in more than 150 countries, Deloitte brings world-class capabilities and deep local expertise to help clients succeed wherever they operate. Deloitte's approximately 170,000 professionals are committed to becoming the standard of excellence.

Deloitte Norway conducts business through two legally separate and independent limited liability companies; Deloitte AS, providing audit, consulting, financial advisory and risk management services, and Deloitte Advokatfirma AS, providing tax and legal services.

2

- Use the appropriate legal name of your country's practice
- Enter country specific text
- Make sure to always update this slide

All presentations related to proposals and/or projects in Consulting must follow The Deloitte Consulting PowerPoint template

- However, when you open PowerPoint a different template, the "common" Deloitte template will appear
 - You can change this by following the guidance received with your pre-studies
 - You may use the “common” template for internal presentations, breakfast seminars, etc, if appropriate
- The “common” Deloitte template does not currently meet our needs related to proposals and project presentations, and therefore an international group is working to make improvements and develop a joint Deloitte template

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

Exercise: Find the mistakes!

- Form groups of 3 people
- Discuss the next slide within the group
- How many “common mistakes” can you identify?
- Recap after 5 minutes

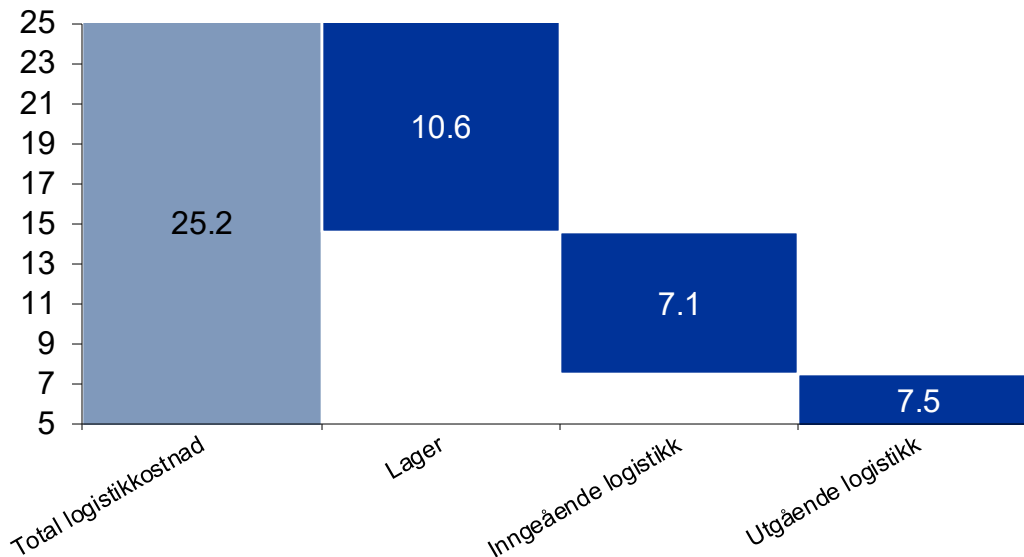

Logistikkostnad

Eksempel

LAGERKOSTANDER

Innføring av ny teknologi som scanning, batch-plukking (kundeordre) vil kunne øke effektiviteten i variable kostnader med ca 20%, totalt ca 800-900 TNOK

Logistikk kostnader består av lager, inngående logistikk og utgående logistikk

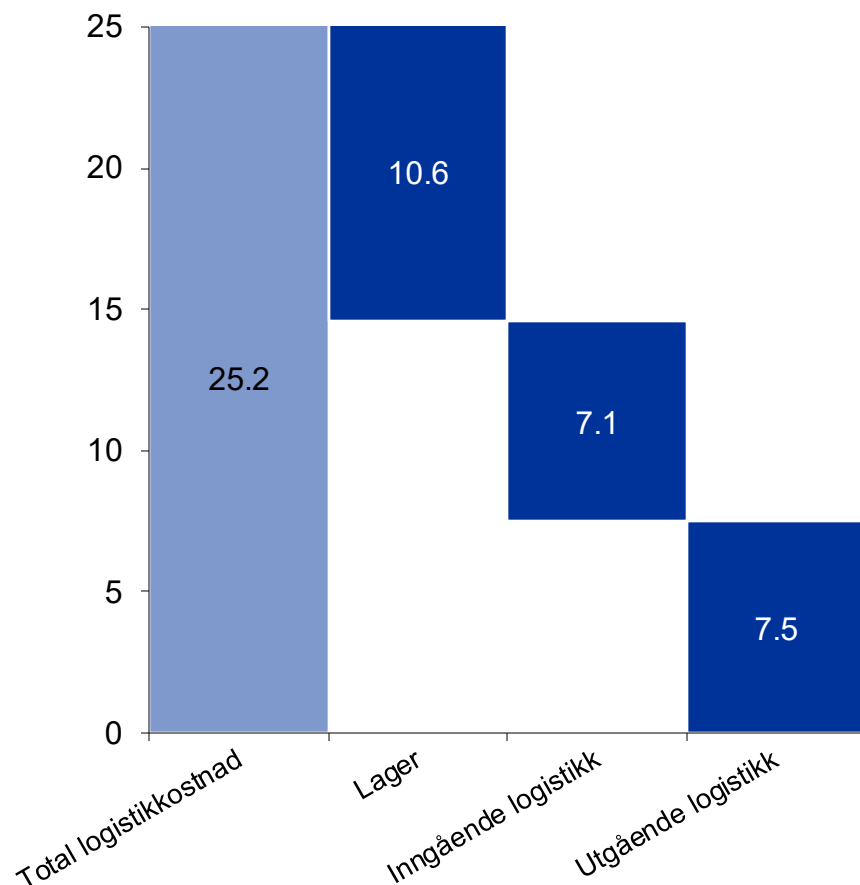

Nøkkeltall!!!

- Ordrestørrelsen er gjennomsnittlig på 10 linjer per ordre
- Omløpshastigheten ligger totalt sett på cirka 7, tilsvarende rundt 60 dager.
- 20 % av den totale lagerverdien (gjsn.52 MNOK) utgjøres av 30 varer,

Relativt lite volum og små ordre samt at Jordan ikke har tatt i bruk teknologiske løsninger for flerkundeplukk og scanning begrenser lagerproduktiviteten

**Forslag
til løsning**

Logistikkostnader (MNOK)

Observasjoner

Innføring av ny teknologi som scanning, batch-plukking (kundeordre) vil kunne øke effektiviteten i variable kostnader med ca 20%, totalt ca 800-900 TNOK

- Ordrestørrelsen er gjennomsnittlig på 10 linjer per ordre
- Omløpshastigheten ligger totalt sett på cirka 7, tilsvarende rundt 60 dager
- 20 % av den totale lagerverdien (gjsn.52 MNOK) utgjøres av 30 varer

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

Working effectively in PowerPoint

- Copying slides
- Slide Master
- Aligning and distributing
- Format painter
- Nudging
- Grouping objects
- Snipping Tool
- Guides & gridlines
- Background
- RGB-code
- Graphs

When copying slides from one presentation to another, make sure to get the right format for your slide so that formatting can be made easier

How to copy a slide from one presentation to another

Both the document you are copying from and to should be open

- Right-click the slide you wish to copy, and select Copy
 - Alternatively, press Ctrl+C
- In the presentation you wish to copy the slide to: select where in the presentation you wish to copy the slide to

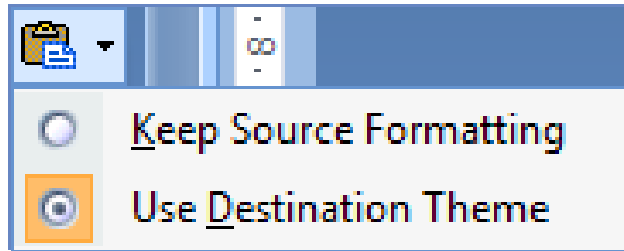

- Right-click, and select Paste

- Alternatively, press Ctrl+V

- This image will appear

- Click on the arrow to get the choices

- Select the alternative you want

- “Keep Source Formatting” will keep the slide to the Master design applied the presentation you copied the slide from
 - “Use Destination Theme” will convert the slide to the Master design applied to your current presentation

- If you want to keep the formatting without the slide master format, copy all content on a slide (ctrl + A), and paste content on a new slide in the destination presentation, then select “Keep Source Formatting”

The Master Slide is the basis for the design and can be used to format the entire presentation

Managing the Master Slide

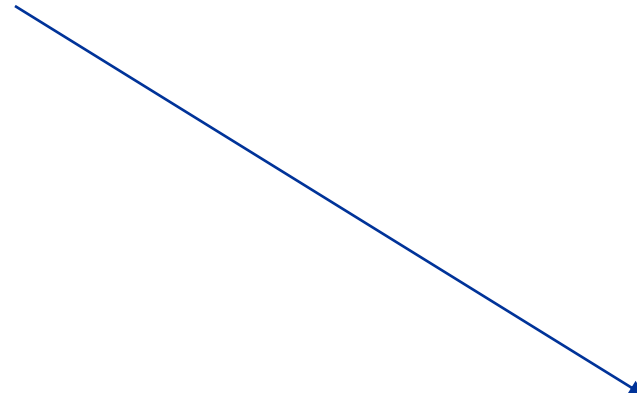

Viewing the Master Slide layouts

- Select the View tab
- In the Presentations View section, click Slide Master

Changing the Master Slide design

- In the Master Slide view, you can change font sizes, text-box sizes, and all other formatting
- No changes should be made to the Deloitte blank presentation template
 - A “Draft” image can be added, if the entire presentation should be marked as a draft
 - Only addition/change allowed: client logo in the bottom right corner

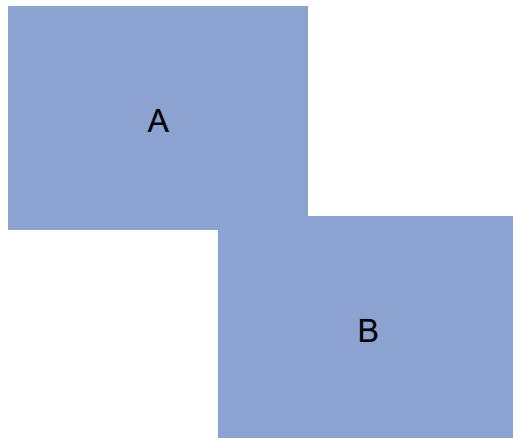

FOR DISCUSSION
DRAFT
PURPOSES ONLY

Use the Alignment function to effectively get text-boxes and graphics in line and create equal spacing between the shapes to create accurate structures

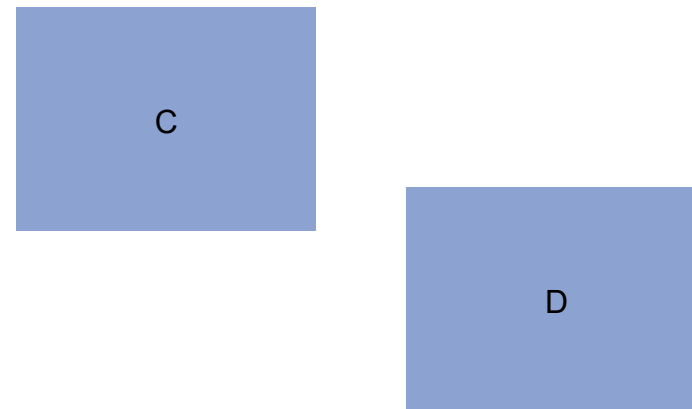

Getting shapes in line

- Select the objects you wish to align
- Go to the Home tab
- In the Drawing section, click Arrange
- Point to Align under Position Objects, and choose the type of alignment you wish
 - Horizontal alignment: top, bottom, or centered
 - Vertical alignment: left, right, or centered

Creating equal space between shapes

- Select the objects you wish to distribute evenly
- Go to the Home tab
- In the Drawing section, click Arrange
- Point to Align under Position Objects, and choose the type of distribution you wish
 - Horizontal distribution
 - Vertical distribution

Use the function Distribute Rows/Columns to get even row heights and column widths in tables

Getting equal row height

- Select the table or rows that you want to adjust to row height to
- Go to the Layout tab
- In the Cell Size section, click Distribute Rows 

Getting equal column widths

- Select the table or columns that you want to adjust to row height to
- Go to the Layout tab
- In the Cell Size section, click Distribute Columns 

If you have not selected any particular rows/columns to adjust, all the rows/columns will be distributed evenly

	Subhead	Subhead	Subhead
Row 1	xx	xx	xx
Row 2	xx	xx	xx
Row 3	xx	xx	xx
Row 4	xx	xx	xx

Use the Format Painter to copy formatting from one text-box or graphic to other one or several other shapes in order to get identical formatting quickly

Copying formatting to one object

- Select the object you wish to copy the formatting from
- Go to the Home tab
- In the Clipboard section, single-click Format Painter
- Select the object you wish to copy the formatting to

Copying formatting to several objects

- Select the object you wish to copy the formatting from
- Go to the Home tab
- In the Clipboard section, double-click Format Painter
- Select the objects you wish to copy the formatting to
 - One-by-one or by selecting a section of objects
- To stop copying the formatting, click Format Painter again or press ESC

There are several tricks to nudging and cropping your text-boxes or graphics, which will help you align shapes accurately and size them accordingly

— Getting your shapes where you want them —

- Select the shape you want to move
- Point the arrow to the border of the shape, so that a four-way arrow is displayed
- Press the left mouse-button down and drag the shape where you want it

Or

- Select the shape
- Use the arrows to nudge the image where you want it

Mini-nudging

- Select the shape
- Hold the Ctrl-button in while nudging the shape with the arrow buttons
 - This allows you to place the image precisely where you want

— Getting your shapes the size you want them —

- Select the shape you want to re-size
- Place your mouse-cursor in one of the circles or squares on the border of the shape
- Press the left mouse-button down and drag the mouse to the size of the shape you wish

To get more precise re-shaping

- Select the shape you want to re-size
- Choose the format tab in the top menu
- Enter the desired size in the size box

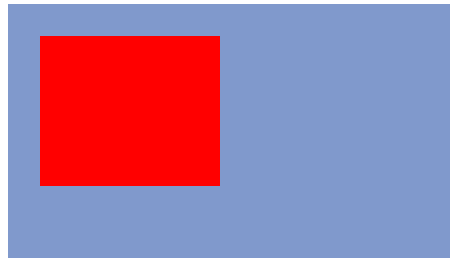

Grouping lets you flip, rotate, move, or resize all shapes or objects at the same time as though they were a single shape or object

Grouping objects

- Select the objects you wish to group
 - To select multiple objects, such as pictures, shapes, or other objects, hold CTRL and click each object
- Go to the Home tab
- In the Drawing section, click Arrange
- Select group

Ungrouping objects

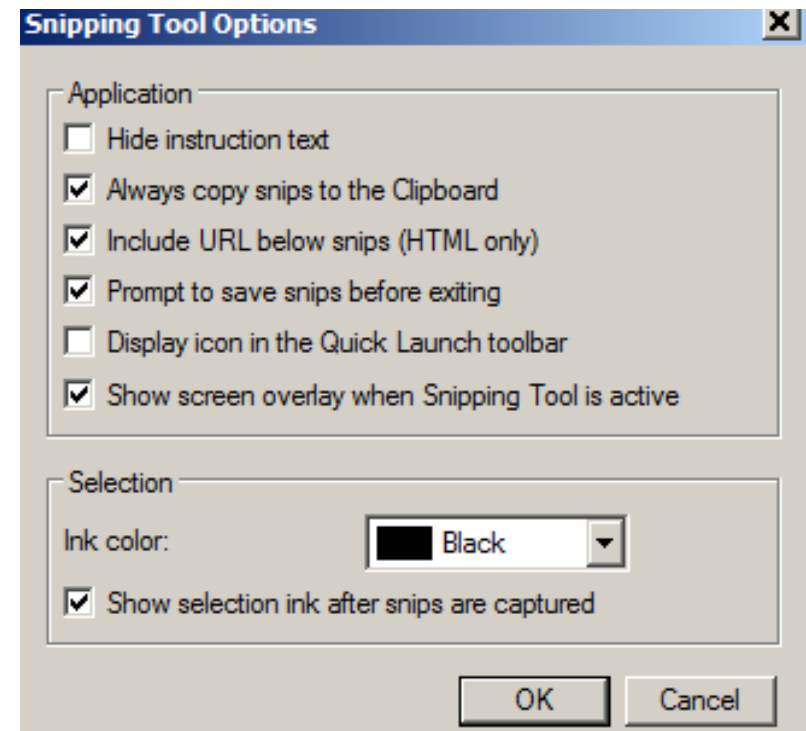

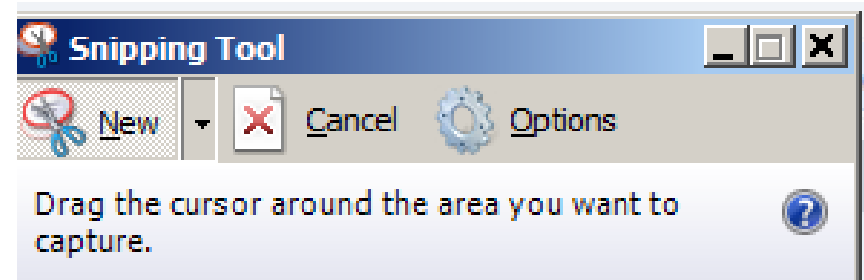

- Select the objects you wish to group
- Go to the Home tab
- In the Drawing section, click Arrange
- Select ungroup

Add text to shapes, try to avoid additional text boxes

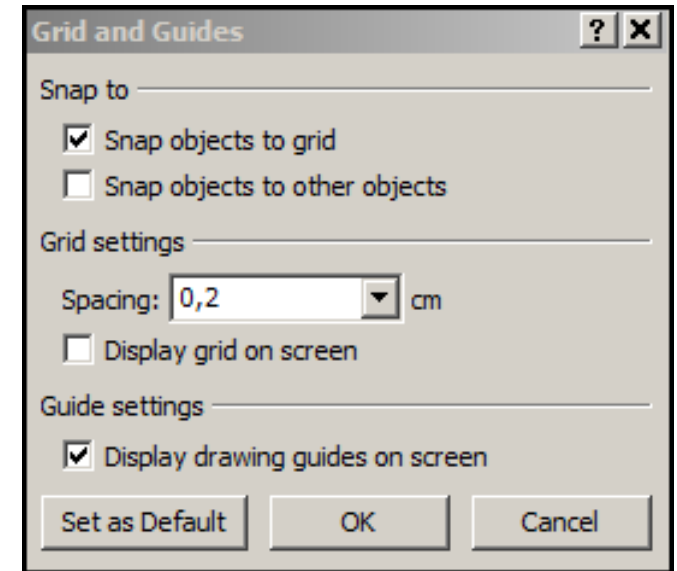

The Snipping Tool is a helpful and effective way to copy images

- To find Snipping Tool, search in the Start-menu
- When starting Snipping Tool a marker will appear
- Move the marker to the corner of the image you want to copy, depress the left-mouse button and mark the area
- Then copy the image and paste it into your presentation
- In the Option menu you can make several adjustments (e.g. remove or change border color)
- Alternative to Snipping Tool is PrintScreen
 - press PrtSc
 - Crop the picture

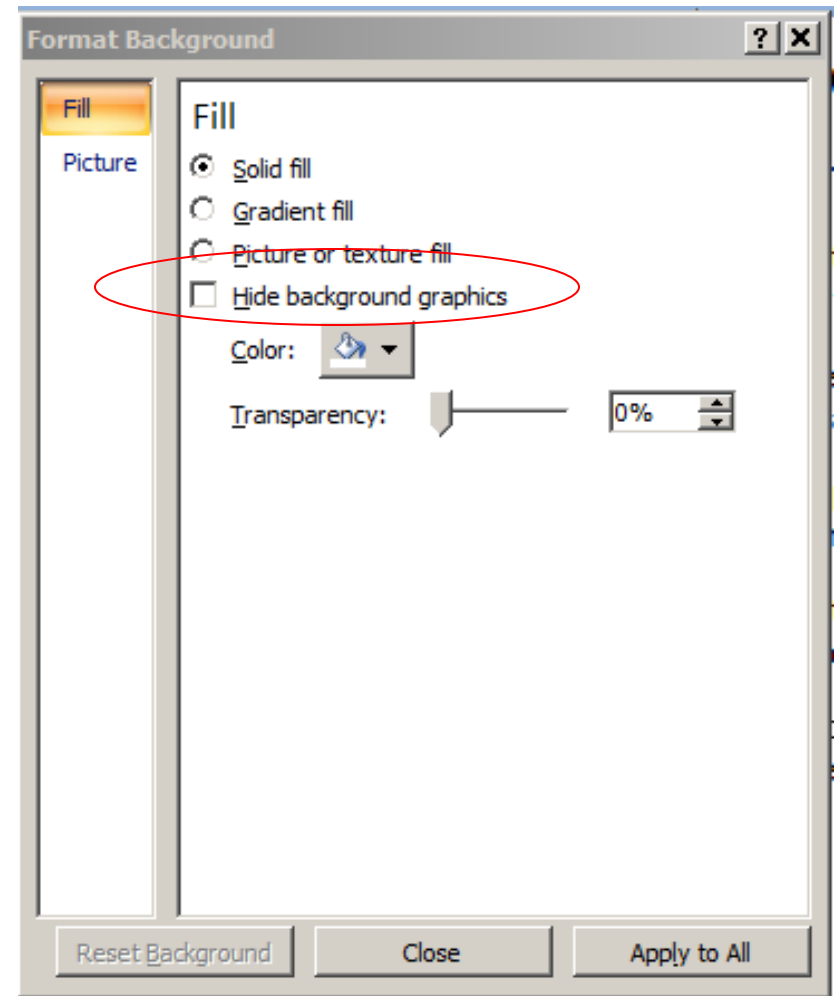

You can use gridlines to easier view and evaluate data, to identify the center of your slide or document and position shapes and objects

- On the Home tab, in the Drawing group, click Arrange, point to Align, and then click Grid Settings
- Another way is to right-click on an empty area of the slide or the margin around the slide, and then click Grid and Guides
 - Shortcut to guides: ALT + F9
- Then do one or both of the following:
 - To position shapes or objects to the closest intersection of the grid, under Snap to, select the Snap objects to grid check box
 - To position shapes or objects to grid lines that go through the vertical and horizontal edges of other shapes or objects, under Snap to, select the Snap objects to other objects check box
- To temporarily override the snap-to options, hold down ALT while you drag the shape or object
- Click Set as Default if you want the current settings in the Grid and Guide dialog box to be the default settings for all presentations
- To add a new gridline: Ctrl Alt + point the arrow on a gridline and drag
- To delete a gridline – use the mouse and point on the gridline, left-click and drag it outside of the slide

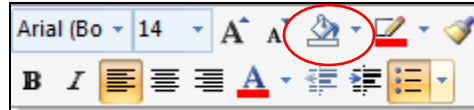

Hide background graphics

- Select the slide where you want to hide the background
- Press the left mouse-button down
- Choose Format Background
- Select the Hide background graphics check box

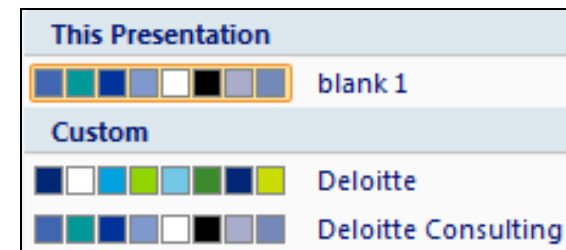

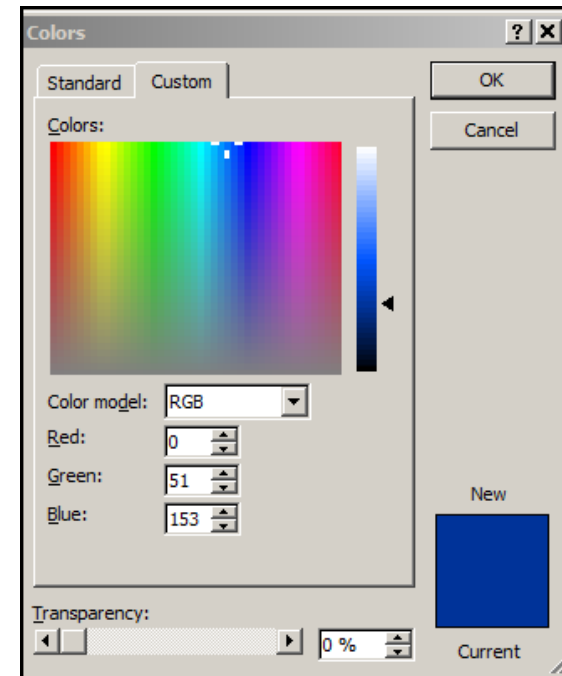

Make sure to use the appropriate RGB color throughout your presentation

- Select the object
- Right-click and choose Format Shape or use the “Quick-menu”

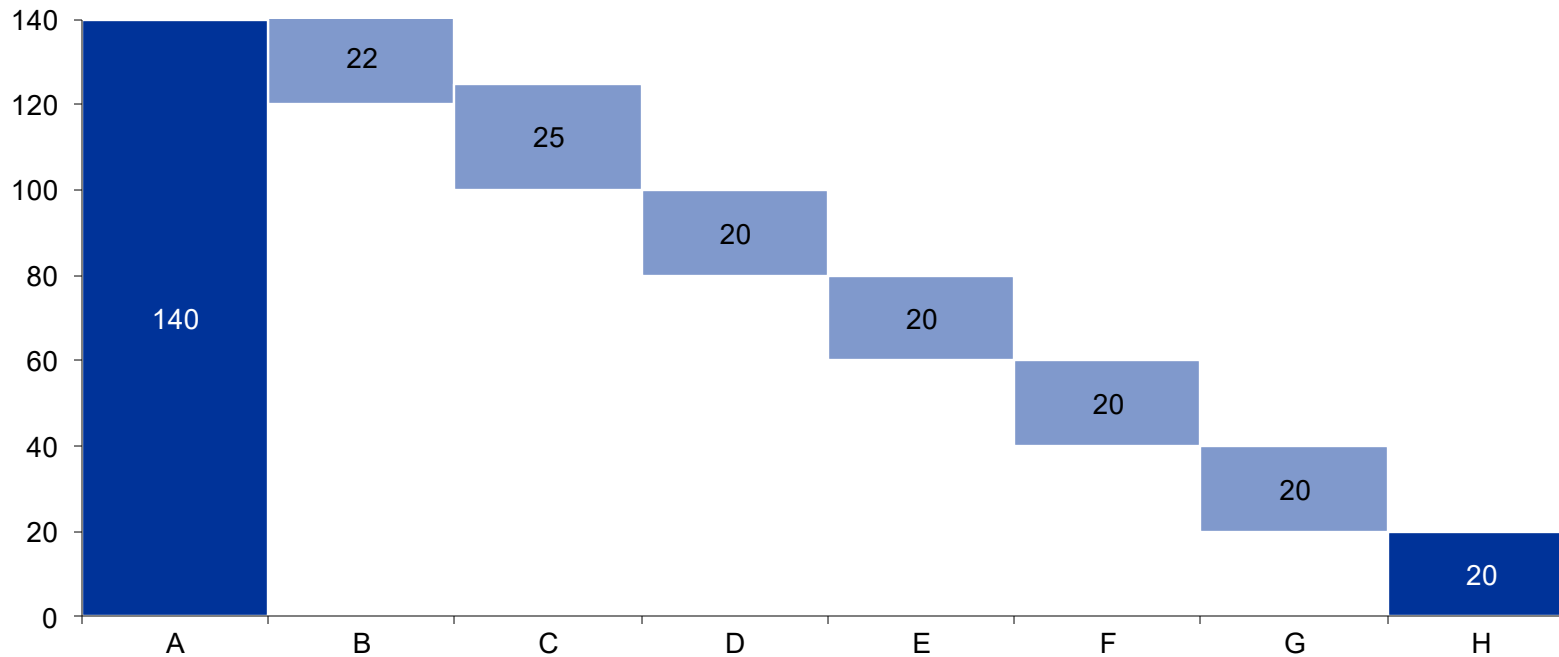

- Click on the arrow next to “Color” in the Fill menu
- Choose More Colors
- Click on Custom
- Fill in the correct RGB code
- You can easily adjust the whole presentation to the Deloitte template by choosing the correct palette
 - Go to the Design tab, click on the arrow next to Colors and choose the palette
 - These colors will be updated throughout the presentation

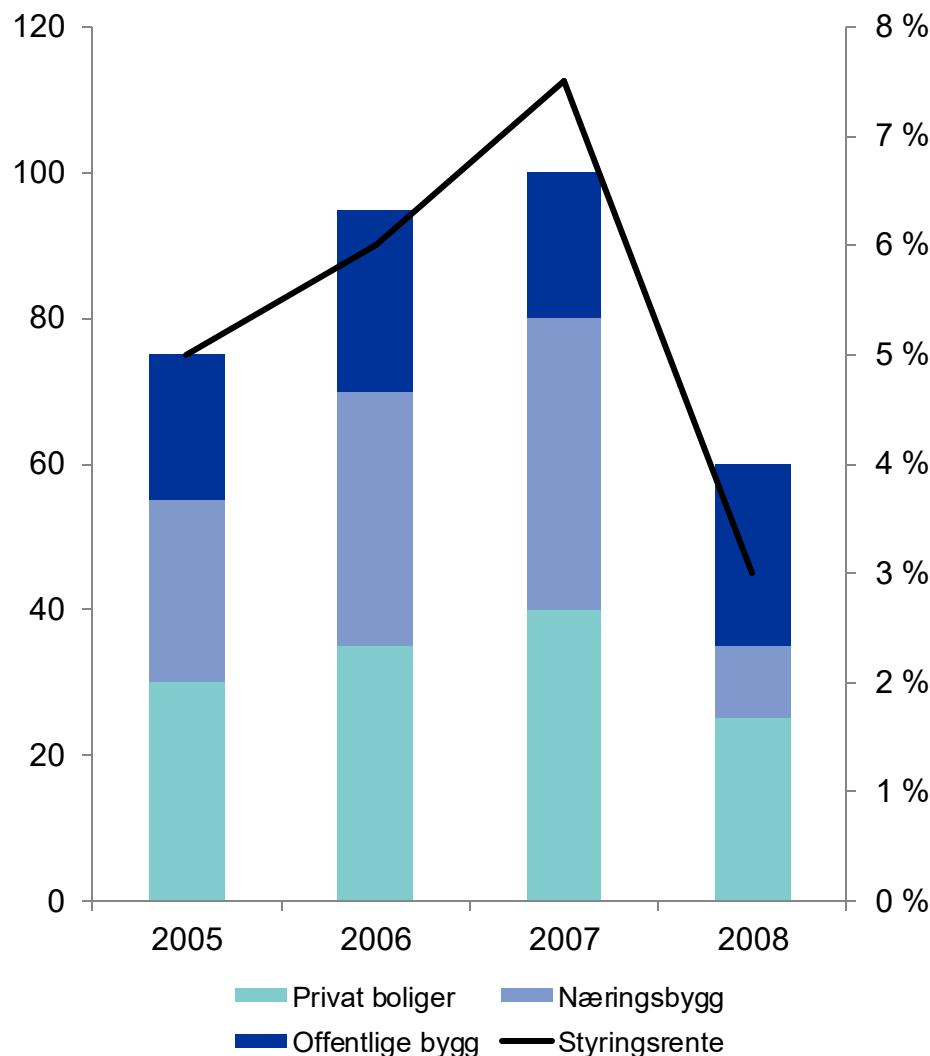

When creating a chart in PowerPoint, use the PowerLibrary as a starting point, instead of the “insert chart tool” in PowerPoint

- Select a graph from the PowerLibrary and copy it into your presentation
- Right-click on the graph and select Edit Data
- An Excel sheet will appear
- Update the figures and the graph will update automatically

A smart way to underline relationships is to view the different variables in the same table

- Mark the graph area and choose the Layout tab under Chart tools
- To the left, in Current Selection, choose the data series you want to change
- Then press Format Selection and choose Series Option
- Select the check box for either Plot series on Primary Axis or Secondary Axis
- It is advisable to choose another design variable on the secondary axis
 - Go to the Design tab in the Chart Tools menu
 - Select the Change Chart Type tab
 - It works well to use the histogram on one set of variables and line in the second set

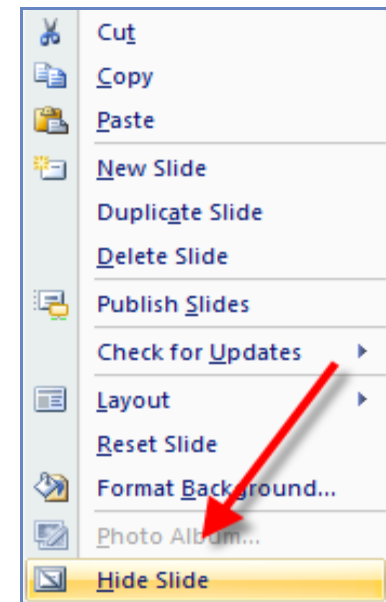

Additional tips & tricks

Slide Design Tips and Tricks – Hidden Slides

- Create Hidden Slides For “Just In Case” Scenarios During A Presentation.
 - Just in Case – You need more information to prove a point
 - Just in Case – You want to take your presentation in a different directing while in the middle of presenting
 - Just in Case – You want to provide supplemental information for specific audience questions
 - Best to Place Hidden Slides at the End of a Presentation, so you Know Exactly where they are.

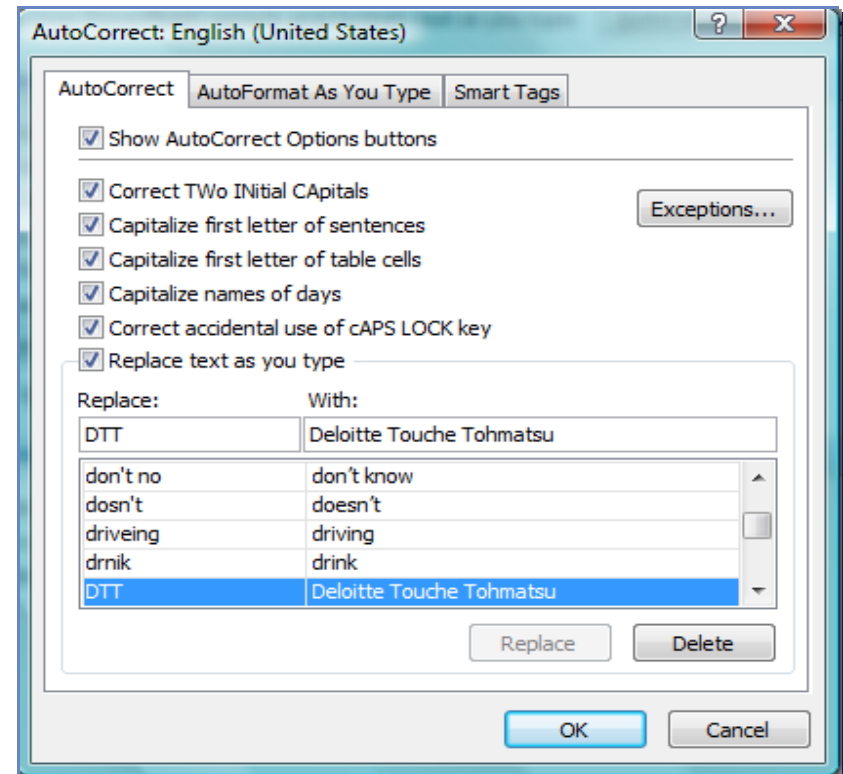

- To Create:
 - Select the Slide or Slides
 - Right-click and Choose “Hide Slide”
 - Also, Can Select “Hide Slide” Button from Slide Show Tab

- To Show Hidden Slides While Presenting:
 - Right-click and Select “Go to Slide”
 - Hidden Slides are Marked in Parenthesis
 - Select the Hidden Slide

Slide Design Tips and Tricks – Quick Tricks with Text

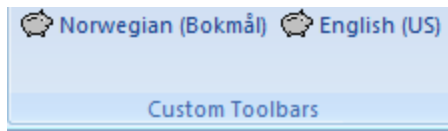

- AutoCorrect Tool – Use to quickly enter long phrases that are repeated throughout a presentation
 - Typing DTT can be corrected to → Deloitte Touche Tohmatsu
 - To change, navigate to: Office Button → PowerPoint Options → Proofing → AutoCorrect Options
 - Enter the phrase to be replaced with its actual text
 - Test out the AutoCorrect tool
 - Hit the space bar or enter after typing the phrase
- Changing/Correcting Text Case Quickly
 - Areas of selected text can be changed or corrected immediately to either: all upper case, all lower case, or proper case
 - This is achieved by selecting the desired text and pressing shift + f3. Keep pressing shift + f3 to continually change the text case

Slide Design Tips and Tricks – Proofreading

■ Language – Set the preferred language to check the spelling and grammar of the selected text:

- Manually done on each slide
 - Select the relevant areas (text boxes, tables, charts, etc.)
 - Select the review tab → language 
 - Choose the preferred language
- Automatically done on the whole presentation
 - Install a macro in PowerPoint (see hand out for further instructions)
 - Select the Add-Ins tab
 - Click on one of the two macro buttons (sets the language to either Norwegian or English for text boxes, tables and drawing tools in the entire presentation)

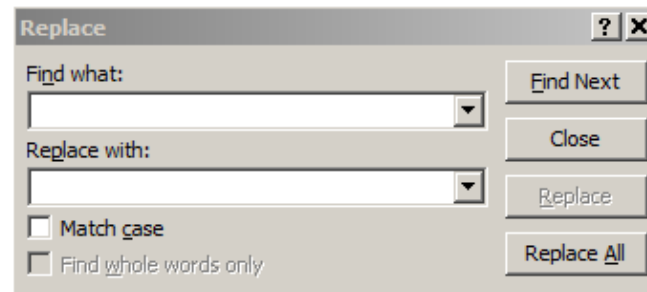

■ Spelling – Check the spelling of the text in the presentation:

- Select the review tab → Spelling 

■ Eliminate double spacing:

- On the Home tab, in the Editing group, click Replace (shortcut: Ctrl + F, select Replace)
- Enter double space in the “Find What field”
- Enter single space in the “Replace With field”
- Click Replace All

Tips and Tricks While Saving

Tip	Action to Perform
Change properties of the file before sending it to a client ▪ Change the name of the author and name of file	▪ Office Button → Prepare → Properties
Save Presentation to PDF or XPS ▪ Save your Presentation as a PDF or XPS (XML Paper Specification) ▪ Print to deskPDF	▪ Office Button → Save-As → Publish as PDF or XPS ▪ Print → Select printer → deskPDF
Save as a PowerPoint Show (pps/ppsx) ▪ Save Your Presentation so that it automatically loads in “Slide Show” Mode	▪ Office Button → Save-As → PowerPoint Show

Tips and Tricks While Presenting

Tip	Shortcut
Focusing audience attention by quickly hiding slides - Make the screen white - Make the screen black - Resume presentation	- Type 'w' or 'W' - Type 'b' or 'B' - Type any key
Avoid having to scroll through the entire presentation to reach a slide Jump to a particular slide in the presentation	Type slide number and press enter
Navigating to another file without closing the presentation - Accessing the taskbar to open another file - Resume presentation	- Type CTRL+T - Minimize the other file
Highlighting points and adding annotations during presentation - Change pointer to 'pen' to allow annotations on screen - Erase all annotations - Change 'pen' back to pointer/arrow	- CTRL+P - Type 'e' or 'E' - CTRL+A
- Presenter Mode - Slide show	- Fn + F7 - F5 (starts at the beginning). Shift + F5 (starts on current slide)

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

Exercise 1

- Copy the slide “Waterfalls - Columns without gap” from the PowerLibrary and make sure keep the destination theme
- Make the following adjustments to the slide:
 - Add the Jordan logo and a “Draft-image”
 - Insert guides according to Deloitte defined workspace
- Decrease the numbers of the categories “B”-“G” by 5 and adjust the graph
- Add category “I”, value 7
- Change the color of category D to RGB 128, 204, 204
- Copy the graph and paste it as a picture (JPG) on another slide
- Copy the whole slide and paste it as a picture
- Hide the background graphics

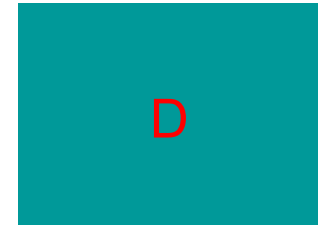

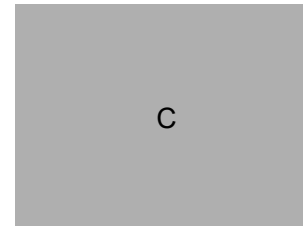

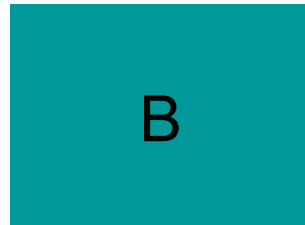

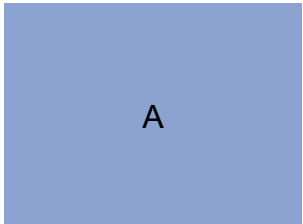

Exercise 2

	Subhead	Subhead	Subhead
Row 1	xx	xx	xx
Row 2	xx	xx	xx
Row 3	xx	xx	xx
Row 4	xx	xx	xx

Adjust the three “subhead” columns to width 5. Adjust the row 1 and 2 to height 3. Then merge row 3 and 4.

Exercise 3

- Arrange the boxes below horizontally and create equal space between the shapes
- Format all the objects as object B
- Then re-size object A to approximately twice as big
- Group object B, C, D
- Write your name in object A

Agenda

Introduction

Designing good slides

The Deloitte Consulting PowerPoint template

Break out 1 – Common mistakes

Working effectively in PowerPoint

Break out 2 – Practical exercises

Wrap up

When developing presentations, remember these guiding principles

- Know the presentation purpose, audience, delivery
 - Projected presentation vs. printed report
 - Formal vs. informal
- Check your work - “broken windows” theory (pay attention to small things)
 - Silly errors cast doubt on the whole and on your message
 - Ask a colleague to read it through
 - There is no excuse for typos
- Less is more
 - Do not clutter the message or slide
 - Ask yourself, do we need this slide and this content?
 - The most important information = most visible
- Know your manager
 - Ask if they have particular style preferences
- Consistency is king

More information about PowerPoint skills can be found on KX, additionally sample presentations are available locally

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee, and its network of member firms, each of which is a legally separate and independent entity. Please see www.deloitte.com/about for a detailed description of the legal structure of Deloitte Touche Tohmatsu Limited and its member firms.

Deloitte provides audit, tax, consulting, and financial advisory services to public and private clients spanning multiple industries. With a globally connected network of member firms in more than 150 countries, Deloitte brings world-class capabilities and deep local expertise to help clients succeed wherever they operate. Deloitte's approximately 170,000 professionals are committed to becoming the standard of excellence.

Deloitte Norway conducts business through two legally separate and independent limited liability companies; Deloitte AS, providing audit, consulting, financial advisory and risk management services, and Deloitte Advokatfirma AS, providing tax and legal services.
