

MODULE 1 · USER EMPATHY

Stories help us...

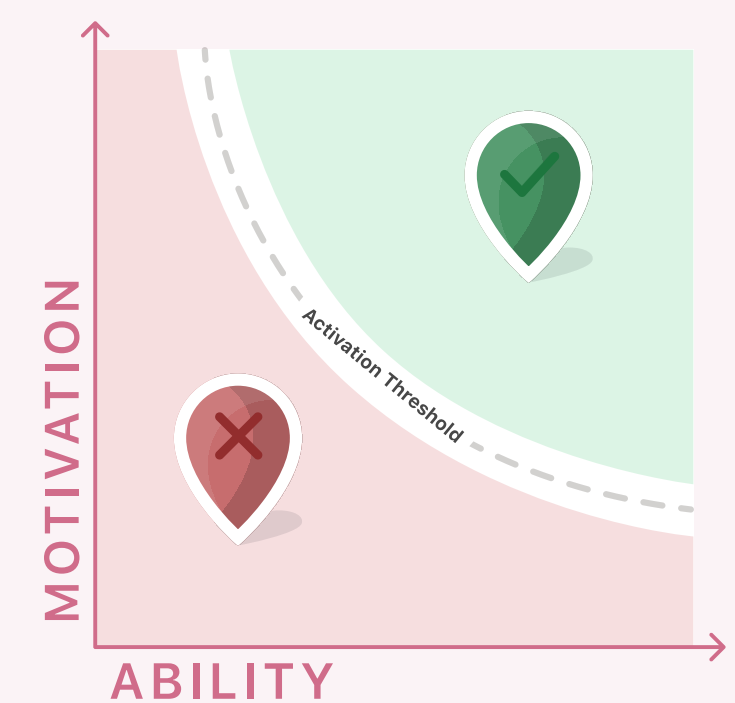

- 1 ...Make sense of the world.
We're wired to make sense of the world through stories.
- 2 ...Empathize with people.
Humans tend to interpret faces and emotions even in abstract shapes and inanimate objects (pareidolia).
- 3 ...Build better experiences.
By focusing on people's needs instead of screens, we unlock the "why" behind the products we create. Plus, comics force our brains to fill the gaps between panels to find new questions & solutions (just like in this 6P Story 👉).

Behavior = Motivation·Ability·Prompt

The BMAP is a mental model to help you understand what influences your users' behavior. In short, you need:

- Motivation: the behavior must be aligned with your hopes, pains, etc.
- Ability: the capabilities of performing the desired behavior
- Prompt: a clear nudge (explicit or implicit) to act at the right moment.

And to find the motivations and abilities of your customers you can ask these 3 questions:

Q1. 🌈 Hope

If you had a magic wand and could instantly X, how would that change your life?

Q2. 💀 Pain

What's your #1 challenge when it comes to X. And why is it so challenging?

Q3. 🚧 Barrier

Tell me about the last time you did X, what was preventing you from Y?

Increase Psych Levels By...

💙 Motivating Users

Your job is to help them achieve their quest (not just your business goals).

📉 Minimizing Friction

Friction = less ability. This means that customers have to use more Psych to take action.
