

Regret Test

If the user was in the room...

The regret test helps you understand if users would behave the same way if they knew how and why everything in your product was built this way.

Black Mirror Test

Evil & extreme use cases...

The black mirror test is helpful when trying to anticipate the second and third-order effect of a feature when scaled to the extremes.

Humane Design Principles

Save Time

Instead of wasting it

Value Attention

Instead of interrupting

Reflect human values

Instead of shareholders' interests

In Real-Life Test

If the screen was a real person...

Words on a screen simulate a personality. So, what type of personality does your product have? Is it a positive one?
